

Patent Claims

1. Container treatment machine (1) having a frame (2), a table top (3) inclined to the horizontal being attached to the top side of the frame, **characterized in that** at least one collecting opening (4) for liquids, fragments of containers or similar foreign bodies (F) is formed in the table top (3), and the areas of the table top (3) connected to the collecting opening (4) are inclined with a falling slope to the collecting opening (4).
2. Container treatment machine according to Claim 1, **characterized in that** a drop chute (5) for the foreign bodies (F) is connected to the collecting opening (4) toward the lower end.
3. Container treatment machine according to Claim 1 or 2, **characterized in that** the collecting opening (4) has a rectangular base shape and is positioned centrally in the table top (3) which also has a rectangular base shape.
4. Container treatment machine according to any one of Claims 1 through 3, **characterized in that** a hollow space (7) to receive drive elements (8), control elements (9) or the like is formed between the drop chute (5) and the outside walls (6) of the frame (2).
5. Container treatment machine according to Claim 4, **characterized in that** the hollow space (7) is ring-shaped.
6. Container treatment machine according to any one of Claims 1 through 5, **characterized in that** a treatment device (10) for the containers is arranged above the collecting opening (4).
7. Container treatment machine according to any one of Claims 1 through 6, **characterized in that** a linear conveyor (11) for the containers is arranged above the collecting opening (4).
8. Container treatment machine according to any one of Claims 1 through 7, **characterized in that** it is designed as an inspection machine.
